

The Asclepion Effect

For over thirty years Asclepion Laser Technologies has been flanking medical research in order to make the benefits of "Made in Germany" laser technology accessible to an increasing number of people.

Today clients in more than 60 countries all over the world use laser devices designed by Asclepion in the optical valley of Jena in Germany.

Together with your physician, Asclepion strives to produce positive results on you every day.

THE ASCLEPION EFFECT

Hair removal

The efficient and gentle solution

THE ASCLEPION EFFECT

Body hair is a matter of taste

For many people, body hair is far more than just a cosmetic problem. In some cases, facial hair or a hairy back can have a devastating impact on self-esteem. However, conventional methods of hair removal such as plucking, electrolysis or waxing are painful, time-consuming and always of limited duration only. Shaving stresses the skin, leaves stubble and must be repeated constantly.

The only real alternative is treatment with laser or flash lamp.

The answer to annoying hair

Concentrated light energy tackles the problem of hair at its root. Our systems are specialized for efficient and gentle hair removal. They may be used to treat larger skin areas such as back, shoulders or legs, or to selectively remove hairs from the face and underarm or bikini area. The application of light damages the root of a hair and stops the hair from regrowing.

Beautiful skin - quickly and gently

Hair removal by laser or flash lamp is performed on cleansed, shaved skin. Before and after the treatment, the skin is cooled to make the application almost painless - only a slight pinching sensation on the skin to indicate that the hair follicles were successfully destroyed. Treatment time is

restricted to a few seconds or up to a few minutes depending on the body area treated. An area of 10 x 10 cm, for instance, takes less than a minute.

Lastingly, tangibly smooth skin

Hair growth takes place in a cycle of growth and resting phases. Pulses of light can only damage the root of a hair during a growth phase. Therefore, several sessions are necessary to reach all hair roots effectively. It has been clinically proven that hair does not regrow at all or only very thinly after laser treatment.
